

1     **WHAT IS CLAIMED IS**

2         1. An intelligent identifying method for allowing access to a computer file,  
3     the method comprising the following steps:

4         obtaining a user's information being stored;

5         designing multiple question databases in accordance with the user's

6     information by a means of transferring, and designing solutions corresponded  
7     to each question being stored in a solution database;

8         posing the user a series of questions selected from the question databases,

9     and collecting answers from the user;

10        checking correctness of the answers in accordance with the solution database;

11     and

12        examining identity of the user in accordance to the correctness of the

13     answers.

14        2. The method as claimed in claim 1, wherein the private information

15     comprises address, age, job, blood type, telephone number, birthday and a

16     prior-consumption data of the user.

17        3. The method as claimed in claim 2, wherein the means of transferring is a

18     direct transferring method that the user's information is designed directly to at

19     least one direct question, whose solution is rested on the user's information.

20        4. The method as claimed in claim 2, wherein the means of transferring is an

21     inferential method that the user's information is designed to at least one

22     inferential question, whose solution is calculated by an eight diagram basis .

23        5. The method as claimed in claim 2, wherein the means of transferring is an

24     inferential method that the user's information is designed to at least one

1     inferential question, whose solution is calculated by an astrological basis.

2         6. The method as claimed in claim 2, wherein the means of transferring is a  
3     consuming method that the prior-consumption data is designed to at least one  
4     consumption question, whose solution is rested on the prior-consumption data  
5     of the user's information.

6         7. The method as claimed in claim 1, wherein the series of questions are  
7     classified into multiple posing types including "Multiple-choice", "Yes Or No",  
8     and "Dialog" types.
